
aidan®

ARTIFICIAL INTELLIGENCE FOR YOUR BUSINESS

from ground to air

a new paradigm for business in the age of AI

The World Is Moving Exponentially Fast

ChatGPT Sprints to One Million Users

Time to reach 1 million users — across the most iconic platforms ever built:

The Acceleration Is Increasing

300K×

AI Compute Growth

Since 2012 — unprecedented acceleration in raw processing power

10×

Capability Jump

Every year — models are leaping, not improving gradually

$4.7T

Enterprise AI Spend

Forecasted by 2033 — the market is pricing in transformation

Sources: Epoch AI 2024, Our World in Data, IDC

AI Isn't a Better Tool — It's a New Operating Altitude

Speed at Scale

Decisions that took days happen in seconds.

Work runs autonomously.

The organization moves at a pace the ground simply can't match.

Intelligence That Compounds

Every interaction, every data point makes the system smarter.

AI accelerates the more you use it.

Reach Without Friction

Cross-functional visibility, real-time insight, and action across every part of the business — without the coordination overhead that slows everything down.

This isn't about doing the same things faster. It's about operating at a level that wasn't previously possible.

What Happens If You Stay on the Ground?

The Cost of Waiting

- Competitors operating at AI speed pull ahead
- Your best people are under leveraged, wasting time
- Data accumulates but never becomes intelligence
- Every month of delay is a month of compounding you'll never get back

> **The winners won't have better AI. They'll have better adoption.**

The Window Is Open

- Early movers are building institutional AI advantage now
- The gap between AI-native and AI-resistant orgs is widening fast
- Organizations that act now will set the standard others chase
- Business models need to be adapted

Three Pillars to Get Airborne

AI Control Tower

Proven IP, prebuilt components that makes AI operational for your business.

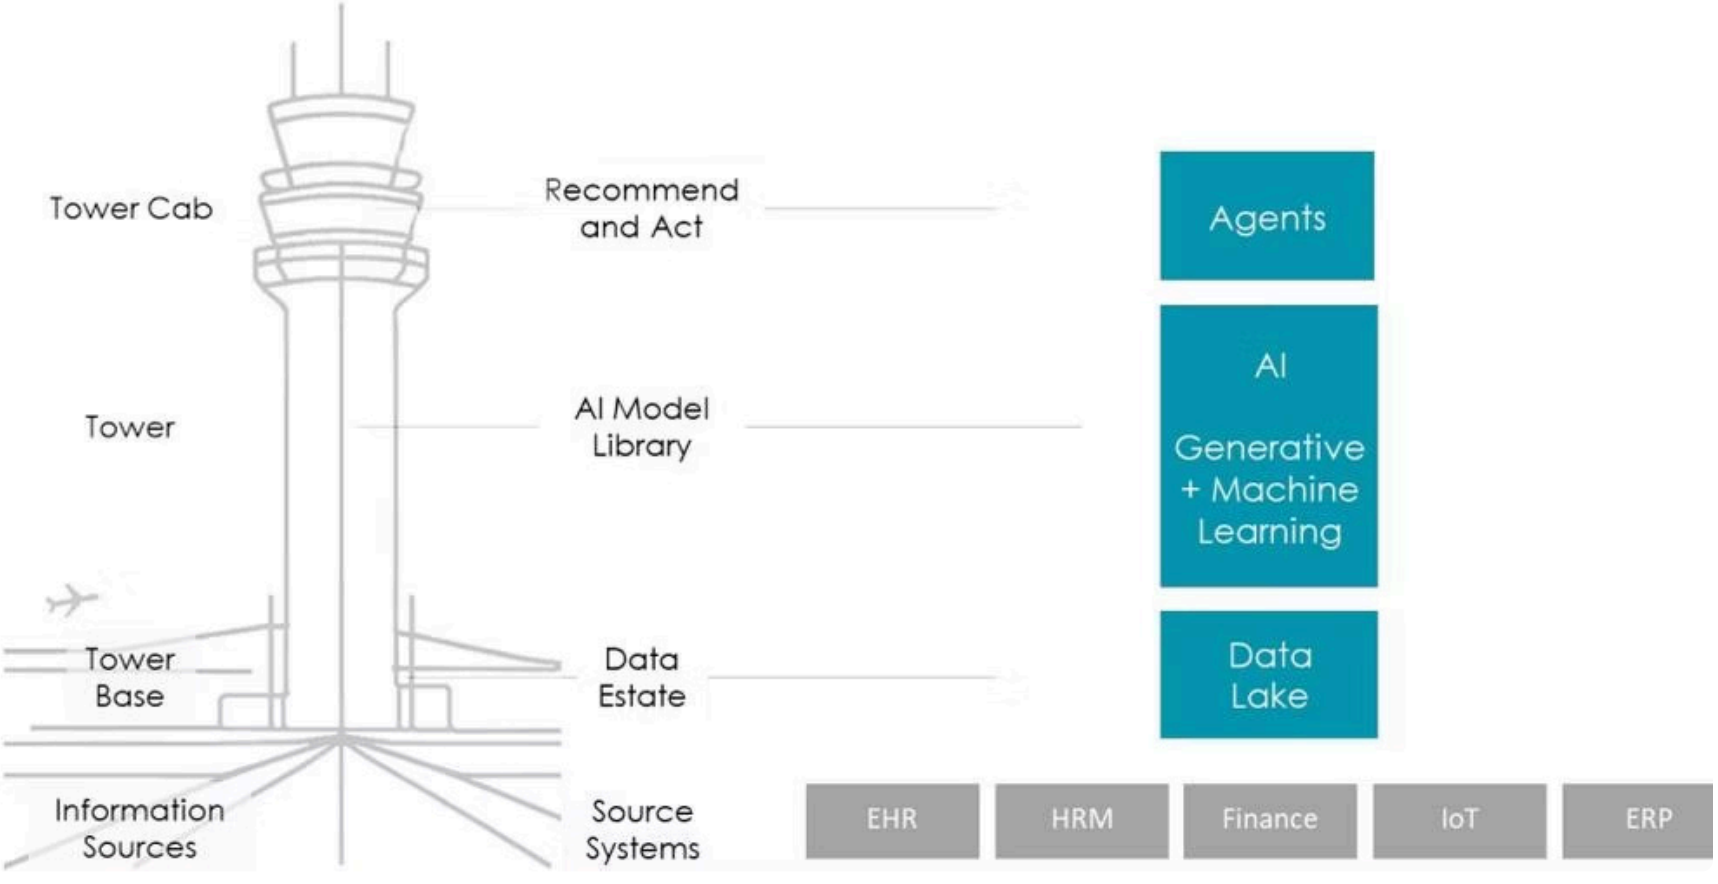
Flight Path

A route built around your priorities, use cases, and the right tools for each mission.

Managed AIR (AI Readiness)

Active monitoring, training, improvement, and change management. You're never flying alone.

The AI Control Tower: Your Data, Your Processes, Intelligence Scaled



Architecture Overview

The AI Control Tower learns continuously from your enterprise data and improves how work gets done — **without changing your core systems.**

Flight Path: *Not every route needs a 747.*

Individual Productivity

- Personal productivity and quick wins
- Email, summarization, research
- Fast, low-risk first flights

Powered by Microsoft Copilot

Team Workflows

- Shared team agents and knowledge helpers
- Department workflow automation
- Governed, repeatable processes

Powered by Copilot Studio

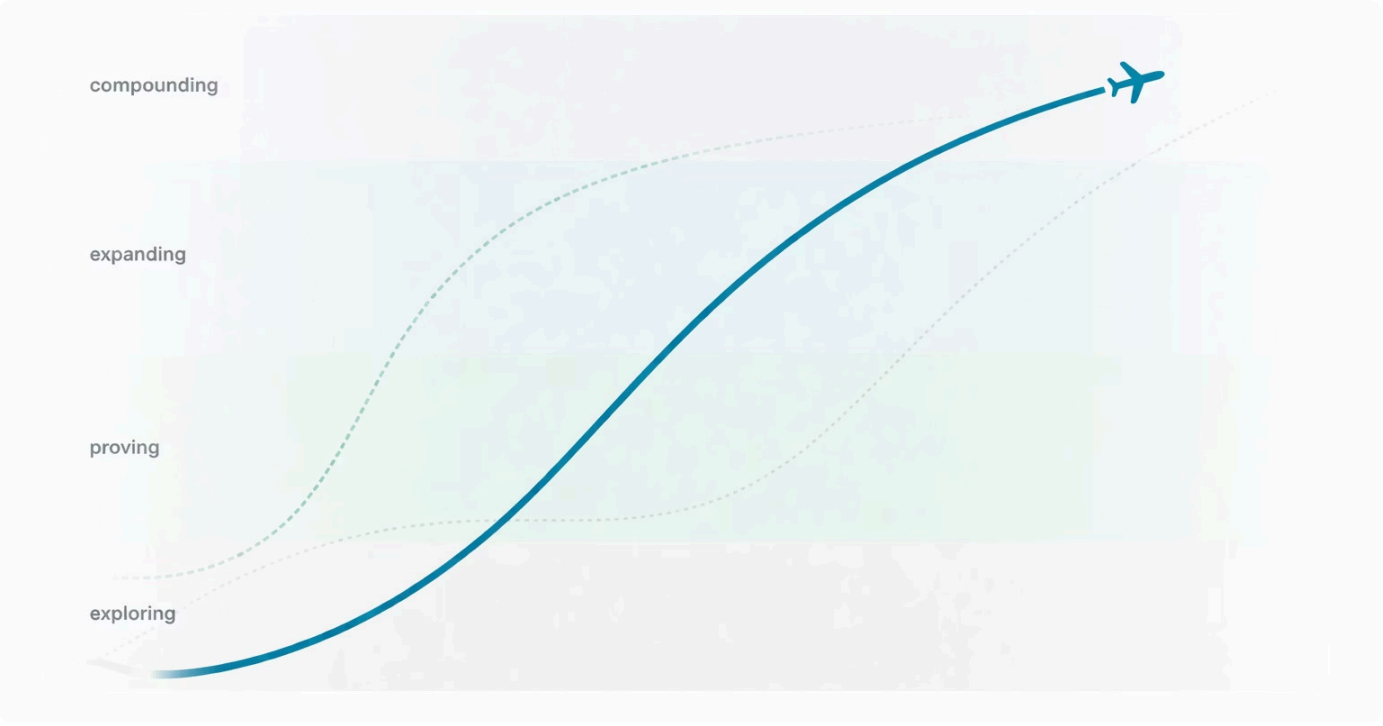
Enterprise Operations

- Cross-system orchestration
- AI Control Tower capabilities
- Data estate and compounding value

Powered by Microsoft Foundry

We match the capability to the destination — start with what you need, scale when you're ready.

A Sample Flight Path



You may have multiple flights at different altitudes — an individual deployment cruising while an enterprise build is still in takeoff.

Compounding: Every investment builds on the last

Expanding: AI is spreading across the business"

Proving: First results are real

Exploring: We know AI matters, we need a plan

What Happens at Each Altitude

Concrete activities, real timeframes.

COMPOUNDING	Control Tower operational, cross-system orchestration, continuous improvement, flywheel spinning	**Ongoing**	*Value multiplying — each investment builds on the last*
EXPANDING	Additional use cases, data estate forming, broader enablement, Managed AIR active	**3–6 months**	*Multiple use cases operational*
PROVING	First use case deployed, initial users trained, baseline monitoring, governance started	**6–12 weeks**	*Working pilot with measured results*
EXPLORING	AI Fit Assessment, leadership education, use case prioritization, success metrics	**2–4 weeks**	*Flight Path roadmap with prioritized use cases*

Managed AIR: Your AI Operating System

AI readiness — active monitoring, training, improvement, and change management so you're never flying alone.

🛡️ Monitoring & Health

Continuous surveillance of your AI solutions — catch issues before they become failures

🎓 Training & Enablement

Your people become confident, capable AI users — not confused bystanders

🔄 Continuous Improvement

Models evolve, outcomes accelerate — value compounds over time

👥 Change Management

Sense and respond as the landscape shifts — never caught flat-footed

📋 Governance

Policies current, data quality maintained, and risks actively managed

🗄️ Data Quality

Clean, current, and trustworthy data — because AI is only as good as what you feed it

Without vs. With Managed AIR

WITHOUT MANAGED AIR

You launched AI. Now what? No one's monitoring it. No one's improving it. Your team isn't trained. The landscape shifts and your investment gathers dust.

- Solutions drift and degrade unnoticed
- Teams revert to old habits
- ROI stalls within months
- Governance gaps expose risk

WITH MANAGED AIR

Aidan actively monitors, improves, and adapts your AI. We train your people, catch issues before they become problems, and keep your AI compounding in value.

- Performance tracked and optimized continuously
- People trained as capabilities evolve
- Value accelerates — not stalls
- Policies current, risks managed

> **The difference between AI that stalls and AI that scales is whether anyone's watching.**

Ready to Fly? Start with an AI Fit Assessment

Workshop-based. Measured in weeks, not years. Leadership leaves with a shared view of priorities, risks, and the path forward.

1

Educate & Evaluate

Align leadership on what modern AI can realistically do — separate signal from hype

2

Brainstorm & Prioritize

Identify highest-value use cases — where AI creates the most leverage with the least disruption

3

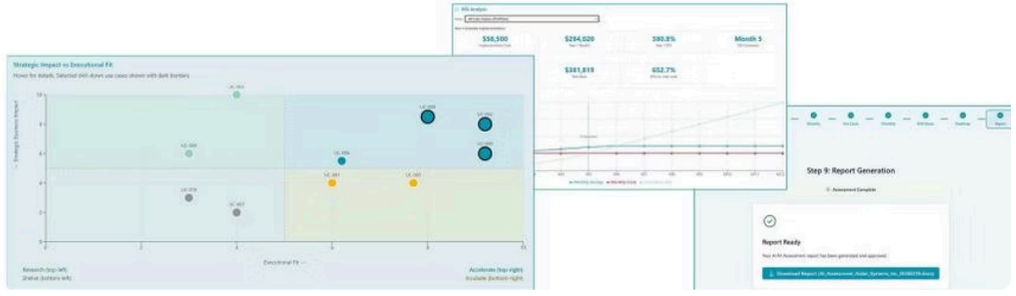
Architect

Define the Control Tower fit and Flight Path configuration aligned to your systems and priorities

4

Plan

Leave with an actionable roadmap including success metrics, timeline, and clear ROI expectations



We built this into an agent — so you can start before the first meeting.

How We Work Together

Build · Project-Based

- Stand up your AI Control Tower
- Implement new use cases
- Tailored to your Flight Path

Operate · Managed AIR Subscription

- Always-on AI readiness
- Monitoring, improvement, change management
- Your AI keeps compounding in value

Train · Project or Embedded

- AIDAN Innovation Institute — structured learning paths for every role
- From AI basics to advanced prompt engineering and agent deployment
- Standalone or embedded within Managed AIR

Most AI projects fail because nobody owns operations. We ship the Control Tower **and** the Managed AIR that keeps it delivering.

your runway is ready.

You've seen the altitude. You've seen what it costs to stay on the ground. The only question is when you take off.

Start Small

One use case. Proven results. Confidence to scale.

Move Fast

Weeks to first flight — not months of planning.

Compound Value

Every step builds on the last. The earlier you start, the further you fly.

> **Begin with an AI Fit Assessment — your pre-flight checklist.**
